

Mobile and Printed Wallet Cards

Digital Version — A digital wallet card acts like an app and can be downloaded to smart phones, tablets and computers. Employees and spouses can use the downloaded mobile wallet card to access their benefits communications, HR portal or carriers' websites with one touch. Or, they can use it to find service center phone numbers. It's an impressive addition to your benefits communications toolbox.

Paper Version — The paper version is a handy way to get the benefits website connections and service center phone numbers directly to employees and spouses. It saves them time in finding contact information and encourages them to contact their benefit administrators directly with any questions or issues.

Mobile Wallet Card

Your employees depend on smartphones for information on-the-go. Make their lives easier by providing benefit contact information through a customized mobile website. We'll work with you to develop a branded site that contains your company's benefit carrier contact information so employees can access it any time. The site is designed for smartphones and tablets, and can also be viewed on a computer.

How It Works

We will customize a template with:

- Your company's logo, colors and fonts
- Contact information for your company's benefits vendors including websites, phone numbers and group IDs

We will work with you to review programming and hosting requirements for the mobile wallet card.

Distribute and Share

The mobile wallet card is easy to share with employees via email or as a link on an intranet or benefits portal. You can also include a QR code in your benefit materials that links directly to the site. Employees can bookmark the site for easy viewing at any time.

Your company can choose to host the mobile wallet card website on your intranet.
